

# E·A·R™ CUSTOM

CUSTOM EARPLUG THAT ARE MOLDED  
ON-SITE, COMPUTER FIT VALIDATED  
AND READY TO WEAR IN MINUTES.

## A Crossroads of Personal Fit, Protection and Comfort.

Now workers can have earplugs made especially for the shape of their earcanals, without the long wait of an outside lab. Plus, each plug's noise reduction ability is computer validated.

- Soft Polymer for Extended Comfort
- Computerized Fit Validation
- Hear-Through Control Filters
- Excellent Value In Custom Protection

Save Time. Save Money. Save Hearing.

# E-A-R™ CUSTOM

No two earcanals are shaped the same. E-A-Rcustom plugs mold to the unique contours of each canal to provide the optimal fit, comfort and protection for every wearer.

## Technician Fits On Site. Wear In Minutes.

No expensive lab is needed. A certified E-A-Rcustom technician comes right on site. The 3 Step process only takes about 15 minutes per employee (multiple employees can be fit simultaneously) so that downtime is minimized.

### 1. In-Ear Molding.

The technician fills the plug's "bladder" with medical grade silicone and fits the plug into the earcanal for a custom, low pressure seal.

### 2. Computerized Fit Validation.

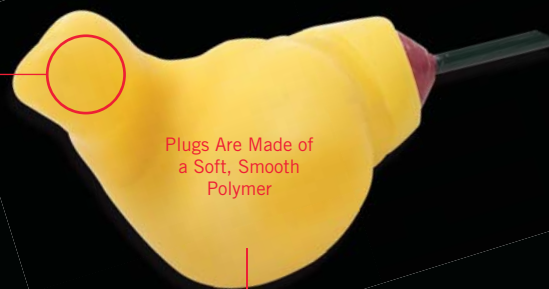

Protection is verified using the patented E-A-Rfit Validation System. The system measures noise levels inside and outside the ear to determine the Personal Attenuation Rating (PAR) for each wearer. This information is documented for future reference.

### 3. Noise Level Calibration.

Protection levels can be custom-calibrated with the insertion of a filter into the E-A-Rcustom chamber. A variety of filters are available to meet different "hear-through" needs.

**Distributors and Fitting Technicians Near You.**  
Start giving workers the ultimate in validated protection today.
